

Training

In an industrial changing world, the rise of human resource competence is highly strategical.

To support its customers in this process the CTTC, as recognized training organization, offers innovative courses combining theory and practice that will help them to broaden their knowledge, to better understand the use of ceramic materials, or to master their manufacturing processes.

OUR OFFER

- Trainings are aimed to engineers and technicians who produce, use or wish to use ceramics.
- They are delivered in the form of theoretical presentations and demonstrations on CTTC's platforms in Limoges. Training topics cover:
advanced ceramics, their properties and applications, raw materials, forming processes including additive manufacturing of ceramics, surface treatments, sintering and characterizations.

INFORMATIONS

- Our catalog and annual schedule are available on the website www.cttc.fr/formation.
- All these training programs can be adapted or modified for on-demand sessions at your company site.
